PERSONAL PROTECTIVE EQUIPMENT (PPE)

#1 – FACE COVERINGS/MASKS

A single cough can produce up to 3,000 droplets. Once out of our mouths, many of the larger droplets will quickly settle onto nearby surfaces while smaller ones remain suspended in the air for hours, where they can be breathed in. While the behavior of the virus-filled droplets in rooms with air conditioning and outside environments are less well understood, they are thought to settle on surfaces more quickly in disturbed air. When an infected person coughs, they can send showers of tiny droplets – known as aerosols – filled with the virus into the air. One of the reasons widespread, public facemasks wearing is so important with Covid-19 has to do with the prevalence of asymptomatic carriers who can still spread the virus to others. It is estimated that around 45% of those infected can carry the virus without developing symptoms. Add to this an incubation period of around five days, but up to 14 days in some cases, before symptoms develop and even those who do go on to show signs of being contagious can spread the virus to a lot of people before they start to fall ill. This makes it particularly difficult to suppress transmission in the community. To be clear, although masks may be moderately effective in protecting the wearer from virus, they are clearly more effective at preventing the spread of the virus from the wearer, thus protecting others.

Types of masks:

- **N95** (a U.S. designation) or **KN95** (a Chinese designation) – Medical grade with or without respirators
 - They are pretty much the same standard for the important stuff
 - Fit tight to face, filter out 95% of the smallest particles

TRAVEL INFORMATION

○ **Surgical Masks**

- Fit loosely over nose and mouth
- Shield against large droplets from a cough or sneeze
- Do not protect very well against small particles

○ **Cloth**

- *Recommended by the CDC for the general public*
- Ensure there are two layers of cloth (i.e. fold over the fabric to create 2 layers)
- Anti-microbial polyester/cotton mixes are effective. Fabric is treated with an anti-microbial agent that kills most
- Many "how to" videos on how to create your own using bandanas, t-shirts, etc.
- Anti-microbial can be washed and reused, however, most are good only for 20 washings

TRAVEL INFORMATION

- **Neoprene Respirator**

- Provides all-purpose protection and can filtrate up to 99.9% of all particulates and dust. Dual-valve exhaust provides one-way easy breathing, expels moisture, and optimizes temperature

- **Cambridge**

- Washable/Reusable. They can filter out almost 100% of particulate matter, allergens or irritants, air pollution and harmful airborne pathogens such as viruses and bacteria

TRAVEL INFORMATION

Helpful Tips

The wearing of face coverings when in public has become a politically charged debate as of late. Nevertheless, many Americans still do not understand the concept that the mask is worn to help protect others from contracting the virus, and not necessarily to help prevent you from contracting the virus. Joined with this confusion is the fact that many can be asymptomatic carriers of the virus AND actively transmitting the disease. Although we would all prefer to not wear face coverings, especially within a group of friends, relatives, or colleagues, the fundamentals of transmission do not change. Wearing of face coverings should be treated as a public responsibility. Once you are distanced from a small group by 6' or more, then mutual discussion should take place among the parties as to whether all parties are comfortable with not wearing face coverings.

It would be wise to purchase and travel with several clean masks, assuming you are not using the one use, disposable kind.

Pay attention to the handling of your mask. Once on and worn, **you must consider it contaminated.** You should carry zip-lock types of bags. Use a gallon size to pack your clean mask(s), and a gallon size for contaminated masks(s). Also consider a quart size bag to carry a second clean mask around in your backpack/briefcase, etc.

DO NOT – touch your worn mask, then touch your face. Once you remove the mask, place it immediately into your “contaminated” ziplock. Then wash and/or sanitize your hands. **DO NOT** throw the mask into your backpack/briefcase, in the car center console, on the passenger seat, on your hotel bed or countertop, etc.

Masks will become a way of life, and I am sure more attractive masks and carriers will be designed and sold, just be wary of knockoffs and purchase from reputable companies.

Eyeglass Fogging – wash the eyeglasses with soap and rinse with warm water. Also, sealing the gap at the bridge of the nose helps. Look for masks with a nose bridge adjuster. The tighter the mask, the better the mask protects and prevents eyeglass fogging.

TRAVEL INFORMATION

#2 – HAND SANITIZER

- The CDC recommends using alcohol-based hand rub with **greater** than 60% ethanol or 70% isopropanol. Unless hands are visibly soiled, an alcohol-based hand rub is preferred over soap and water in most clinical situations due to evidence of better compliance compared to soap and water. Hand rubs are generally less irritating to hands and are effective in the absence of a sink.
- Hands should be washed with soap and water for at least 20 seconds when visibly soiled, before eating, and after using the restroom.

- **Sanitizer, if unavailable, is easy to make!**

Your sanitizer mix must be at least 60 percent alcohol to be effective. But it is better to get way above that—aim for a minimum of 70%, but the 91% will ensure you do not drop below the 60% alcohol threshold!

- **Gel Form:** Isopropyl Alcohol, Aloe Vera gel, Tea Tree oil, squeeze bottle

(3) parts 91% Isopropyl Alcohol to (1) part Aloe Vera gel. Add a few drops of tea tree oil to give it a pleasant scent. Load the solution into squeeze bottles – this is a gel.

- **Spray Form:** Isopropyl Alcohol, Glycerol or Glycerin, Hydrogen Peroxide
Distilled Water, spray bottle

Mix 12 fluid ounces of 91% Isopropyl Alcohol with 2 teaspoons of Glycerol (Glycerol is not necessary but helps with the alcohol drying out your hands). Mix in 1 tablespoon of Hydrogen Peroxide, then 3 fluid ounces of distilled or boiled (then cooled) water. (If you are working with a lower-concentration solution of rubbing alcohol (70%), use far less water; remember, at least $\frac{3}{4}$ of your final mixture has to be alcohol.).

Load the solution into spray bottles—this is not a gel, it's a spray. You can wet a paper towel with it as well and use that as a wipe. You can add in a splash of essential oil (i.e. lavender) to your concoction to make it smell nice.

TRAVEL INFORMATION

- Purchase a 40oz. Purell hand sanitizer made for those dispensing units. They can be obtained from a hardware/home improvement store. Using this, then "re-fill" 3oz travel size bottles for the car, the backpack, etc. Travel with a minimum of at least 2 – 3oz bottles of sanitizer to get you through a work week.
- Consider everything you touch to be potentially contaminated and either wash your hands and/or sanitize.

TRAVEL INFORMATION

Toxic

7/14/2020

The FDA is warning consumers and health care providers that the agency has seen a sharp increase in hand sanitizer products that are labeled to contain ethanol (also known as ethyl alcohol) but that have tested positive for methanol contamination. Methanol, or wood alcohol, is a substance that can be toxic when absorbed through the skin or ingested and can be life-threatening when ingested.

The agency is aware of adults and children ingesting hand sanitizer products contaminated with methanol that has led to recent adverse events including blindness, hospitalizations, and death.

Methanol is not an acceptable active ingredient for hand sanitizers and must not be used due to its toxic effects. FDA's investigation of methanol in certain hand sanitizers is ongoing. The agency will provide additional information as it becomes available.

Consumers who have been exposed to hand sanitizer containing methanol and are experiencing symptoms should seek immediate treatment for potential reversal of toxic effects of methanol poisoning. Substantial methanol exposure can result in nausea, vomiting, headache, blurred vision, permanent blindness, seizures, coma, permanent damage to the nervous system or death. Although all persons using these products on their hands are at risk for methanol poisoning, young children who accidentally ingest these products and adolescents and adults who drink these products as an alcohol (ethanol) substitute, are most at risk.

<https://www.fda.gov/drugs/drug-safety-and-availability/fda-updates-hand-sanitizers-methanol#products>

Note: A copy of the most current list of recalled hand sanitizers is listed on tab #2 in the '**Coronavirus Retail Restrictions by State_07142020.xlsx**' file accompanying this document!

TRAVEL INFORMATION

#3 – DISINFECTANT WIPES

- Traveling with readily available disinfecting wipes will become a necessity. How much faith you place in others thoroughly cleaning seats, cars, hotel rooms, etc. will dictate how much and how often you use them.
- Wipes are currently hard to find, but again, are easy to make with several options of chemicals. You can use alcohol-based or bleach-based disinfectant wipes. You can also use any or an EPA-registered disinfectant (*such as Lysol® All-Purpose Cleaner - Lemon Breeze, or Pine Sol multi-purpose cleaner, etc.*).
- The EPA list can be located at: <https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2>.

- **Disinfectant Wipes, if unavailable, is easy to make!**

For bleach-based disinfectant wipes:

Bleach (at least 1000ppm sodium hypochlorite)
Water
Paper towels or cloths
An airtight storage container

For alcohol-based disinfectant wipes:

Isopropyl alcohol or ethanol (also known as grain alcohol)
Water
Paper towels or cloths
An airtight storage container

- **Before using the bleach, alcohol, or an EPA-registered disinfectant it is crucial to take note of the following:**

If using bleach, ensure that the bottle is not past its expiration date. Additionally, make sure that this bleach is minimally 1000ppm sodium hypochlorite or says that it is intended for disinfection. Never mix household bleach with ammonia or any other cleanser.

If using alcohol, you'll need to dilute it. Isopropyl alcohol contains 91% alcohol content and ethanol (also known as grain alcohol) contains 95% alcohol content. The ideal alcohol content to properly disinfect is 70% isopropyl alcohol or 60% ethanol. Follow the steps below to properly

TRAVEL INFORMATION

dilute it. If you are pulling from an older stock of alcohol, make sure that it was kept in an airtight container in a cool, dark place so that the alcohol didn't partially evaporate. If you are unsure, purchase a new bottle. Isopropyl alcohol can be purchased online or at your local pharmacy. Ethanol can be purchased at your local liquor store.

- **How to make bleach-based disinfectant wipes:**
 - Put on gloves and open a window for proper ventilation.
 - Mix ingredients in an airtight container. Depending on the volume you're looking for, the ratios are either 5 tablespoons of bleach to 1 gallon of water or 4 teaspoons bleach to 1 quart of water.
 - Submerge your paper towels or cloths completely into the diluted bleach for at least 5 minutes to soak up the solution effectively.
 - Tightly close the container.
 - **According to the CDC, bleach solutions will only be effective for disinfection up to 24 hours.** After that time, you will need to make a new batch of diluted bleach every time you want to use disinfectant wipes.
- **How to make alcohol-based disinfectant wipes:**
 - Put on gloves.
 - If using 91% isopropyl alcohol, mix 7 cups of alcohol with 3 cups of water.
 - If using 95% ethanol (otherwise known as grain alcohol), mix 6 cups of alcohol with 4 cups of water.
 - Place your paper towels or cloths into an airtight container and fill it with your newly diluted alcohol solution until they are completely submerged.
 - Wait 5 minutes before using so your paper towels or wipes can properly soak up the solution.
 - Tightly close the container and store your wipes in a dark, cool place to prevent alcohol evaporation (or place in a plastic sealable bag for portable wipes).

Once you have made your wipes, it is important to use them properly so that you are not just spreading germs around. You should wipe in one direction to avoid re-infecting areas.

For bleach-based wipes, the surface needs to remain wet for at least three minutes to disinfect it properly. For full effectiveness of sanitizing wipes, you have to let the surface soak for the right amount of time, or you are not disinfecting. Remember that any time you are handling bleach, you should be wearing gloves and in a room with proper ventilation. Do not wear clothes that you are particularly fond of while making or using bleach wipes because the bleach may discolor them. You should also avoid cleaning anything metal, especially stainless steel, with bleach because it can cause it to rust prematurely.

For alcohol-based wipes, wet the surface completely. Your surface is disinfected once the surface dries. Wear gloves to prevent skin irritation.

TRAVEL INFORMATION

These wipes are intended for use on hard surfaces. To disinfect soft surfaces such as carpeted floor, rugs, and drapes, the CDC recommends using soap and water or other cleaners deemed appropriate.

If you can put them in the laundry, make sure that you launder items according to the manufacturer's instructions and use the warmest appropriate water setting. Let the items dry completely.

You can also disinfect surfaces in your home with an EPA-registered disinfectant spray. The CDC website includes a list of these disinfectants that work on both hard and soft surfaces.

The CDC advises to follow this process:

- Check that your product is EPA-approved
- Read the product directions, particularly about what surface it can be used on and any precautionary measures to take
- Put on gloves before using, remove after use, and wash your hands thoroughly (with soap and water for at least 20 seconds)
- Pre-clean the surface if the product directions say so
- Make sure the disinfectant remains wet on the surface for the necessary amount of time to ensure effectiveness

Where to use disinfectant wipes:

There are many surfaces in your home that you probably don't clean as often as you should. And while hard high-touch surfaces are better incubators for the virus, it can live on soft surfaces such as your clothing and carpets, too. The CDC notes that some of the most high-touch surfaces in your home include:

Tables
Doorknobs
Light switches
Countertops
Handles
Desks
Phones
Keyboards
Toilets
Faucets
Sinks
Tablets and other touch screens
Remote controls
Clothing
Towels
Linens

TRAVEL INFORMATION

Helpful Tips

- For easy “travel” wipes, use the alcohol-based wipe method with plain baby-wipes. You can also use a flushable toilet wipe, only select one that is more durable.
- Use approximately 1-2 cups of 91% Isopropyl Alcohol, but **DO NOT** mix with water, as the wipes are already pre-moistened. Just pour in the alcohol, re-seal the container, then hold vertically for 1 minute, then rotate vertically to the other end and hold for 1 minute.

#4 – THE “COVID KEY”

- Consider purchasing a tool commonly known as a “Covid Key”. A Covid Key is made of brass (*which has antimicrobial properties*) and is used to assist you in opening doors with pull handles, push elevator buttons, and selecting on touch screens such as ATM’s or Fuel Pumps. These can be attached to your keyring or kept in your pocket.

TRAVEL INFORMATION

TRAVELING DURING THE PANDEMIC

#1 - CDC RECOMMENDATIONS

Centers for Disease Control and Prevention
CDC 24/7: Saving Lives, Protecting People™

Whether you are stocked up on hand sanitizer or not, the CDC recommends that you:

- **Wash your hands regularly:** Again, nothing beats washing your hands for at least 20 seconds with soap and water. Hand sanitizer — even the real, professionally made stuff — should always be used when you are traveling or unable to wash your hands.
- **Stay at least 6 feet away from other people:** This is called social distancing. Keeping your distance makes it hard for the virus to jump from someone else to you (or vice versa) through respiratory droplets. The White House also recommends avoiding gatherings of 10 or more people, which should be easy because you are staying at home.
- **Wear a cloth face mask outside the house:** The CDC now recommends everyone wear cloth face coverings when out in public where you may be near other people. Kids under 2 years old should not wear a mask, nor should anyone who has difficulty breathing or taking it off.
- **Avoid touching your face:** You could transmit the virus from your hands into your mouth.
- **Clean and disinfect** frequently touched surfaces: Do it daily, especially if items or people leave or enter your home.

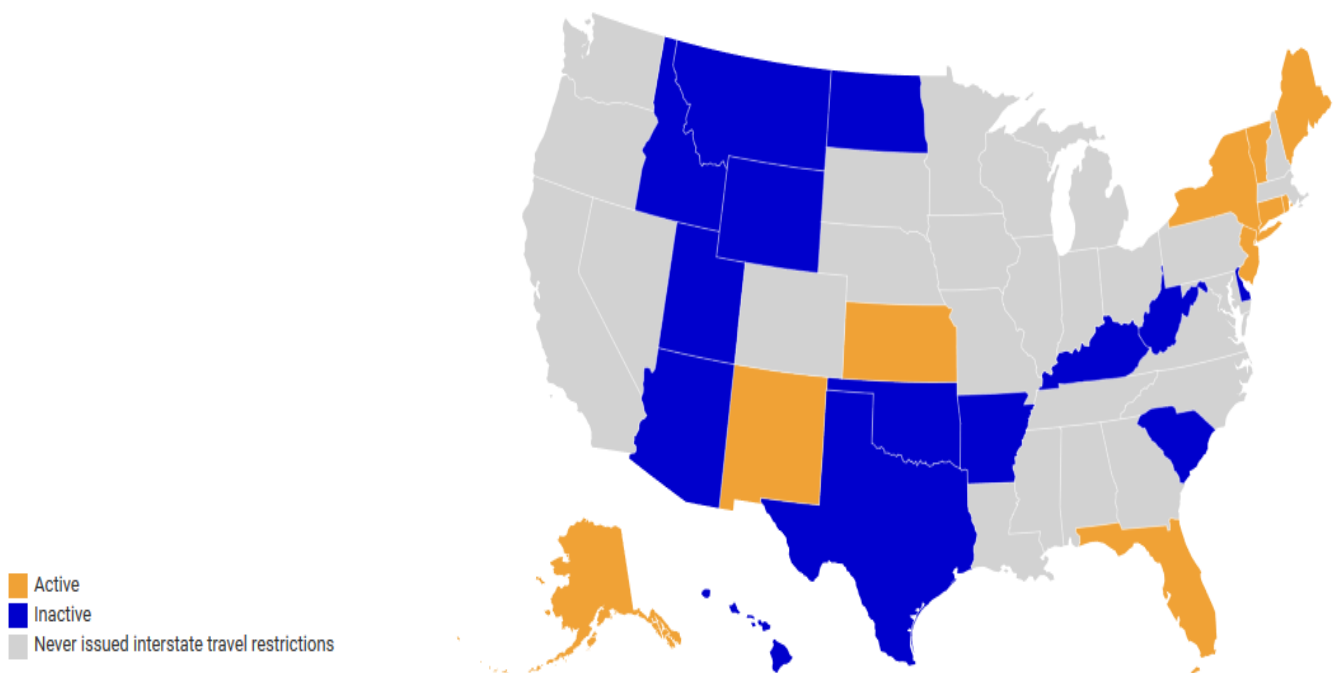

TRAVEL INFORMATION

TRAVEL RESTRICTIONS BY STATE (as of 7/14/2020)

Not all states have issued legally binding restrictions on out-of-state travelers. In addition to executive orders, this section lists recommendations, advisories, and requests related to interstate travel made by governors and state agencies in reaction to the coronavirus pandemic.

States where governors or state agencies have issued an executive order implementing travel restrictions

TRAVEL INFORMATION

MOST RECENT STATE ACTIONS

July 14, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that New Mexico, Ohio, Wisconsin, and Minnesota had been added to the joint travel advisory originally announced June 24. Travelers from those states will need to self-quarantine for 14 days upon arriving in the tristate area. Delaware, which was added to the list July 7, has been removed. The list now includes 22 states. Gov. Cuomo also announced that visitors to New York from those 22 states will need to fill out a contact form with contact information or face a \$10,000 fine. Gov. Lamont said Connecticut would join New York in requiring visitors to fill out a form.

July 13, 2020: Gov. David Ige (D) announced that he was extending the quarantine requirement for out-of-state travelers through September 1. Previously, Ige had said a new program would take effect August 1 that would allow visitors to avoid the quarantine requirement by presenting a negative coronavirus test. The program will not start before September 1.

July 7, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that Delaware, Kansas, and Oklahoma had been added to the joint travel advisory originally announced June 24. Visitors from those states will need to quarantine for 14 days upon entering Connecticut, New York, or New Jersey. The full list of states includes Alabama, Arkansas, Arizona, California, Delaware, Florida, Georgia, Iowa, Idaho, Kansas, Louisiana, Mississippi, North Carolina, Nevada, Oklahoma, South Carolina, Tennessee, Texas, and Utah.

July 2, 2020: The Pennsylvania Department of Health recommended that residents who travel to 15 states with rising COVID-19 cases quarantine for 14 days upon returning to Pennsylvania. The states include Alabama, Arizona, Arkansas, California, Florida, Georgia, Idaho, Louisiana, Mississippi, Nevada, North Carolina, South Carolina, Tennessee, Texas, and Utah.

July 1, 2020: Maine Gov. Janet Mills (D) announced that she is lifting the 14-day quarantine requirement for travelers from New York, New Jersey, and Connecticut beginning July 3.

June 30, 2020: Gov. Michelle Lujan Grisham (D) extended the stay-at-home order and the mandatory 14-day quarantine for all out-of-state travelers.

June 30, 2020: The Kansas Department of Health and Environment updated its travel-related quarantine guidelines to include South Carolina and Florida. Travelers to Kansas, as well as Kansas residents, who have recently traveled to South Carolina and Florida will need to self-quarantine for 14 days.

June 30, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that eight more states had been added to a joint travel advisory requiring out-of-state visitors to self-quarantine for 14 days. The governors announced the travel advisory June 24 and originally included Alabama, Arkansas, Arizona, Florida, North Carolina, South Carolina, Texas, and Utah. The list was expanded to include California, Georgia, Iowa, Idaho, Louisiana, Mississippi, Nevada and Tennessee.

TRAVEL INFORMATION

TRAVEL RESTRICTIONS, ADVISORIES, AND RECOMMENDATIONS BY STATE

Not all states have issued legally binding restrictions on out-of-state travelers. In addition to executive orders, this section lists recommendations, advisories, and requests related to interstate travel made by governors and state agencies in reaction to the coronavirus pandemic.

Alabama

As of July 15, 2020, Alabama had not issued any travel restrictions.

Alaska

May 29, 2020: Alaska Gov. Mike Dunleavy (R) announced he was extending the 14-day quarantine requirement for out-of-state travelers and residents returning to the state through June 5. According to Dunleavy, travelers who can prove they tested negative for COVID-19 before coming to Alaska can bypass the 14-day quarantine requirement. Dunleavy asked travelers to get tested at least 72 hours before arriving in the state.

May 15, 2020: Gov. Mike Dunleavy (R) extended the travel restrictions on out-of-state travelers and residents returning to the state through June 2. The restrictions had been set to expire on May 19.

April 21, 2020: Gov. Mike Dunleavy (R) said the international and out-of-state travel restrictions had been extended through May 19. The mandatory quarantine also applies to Alaska residents returning to state.

March 11, 2020: Gov. Mike Dunleavy (R) ordered all people traveling to Alaska, including residents, to fill out a travel declaration and complete a two-week quarantine. The order went into effect on March 25, 2020 and was to be reevaluated by April 21, 2020.

Arizona

May 12, 2020: As part of Arizona's reopening plan, Gov. Doug Ducey (R) rescinded the executive order that enacted the 14-day quarantine requirement for out-of-state visitors.

April 7, 2020: Ducey ordered all people traveling to Arizona from areas of the country with widespread COVID-19 cases to self-quarantine for 14 days. The order specifically mentioned Connecticut, New York, and New Jersey as areas with significant community spread. The order went into effect on April 9 and remained in effect until the expiration of Arizona's stay-at-home order.

Arkansas

June 15, 2020: The 14-day travel requirement for out-of-state travelers from coronavirus hot spot areas expired.

May 14, 2020: Nathaniel Smith, the Arkansas Secretary of Health, issued a 14-day quarantine requirement for out-of-state travelers who have been in an international location or New York, New Jersey, Connecticut, or New Orleans in the last 14 days.

TRAVEL INFORMATION

May 6, 2020: Gov. Asa Hutchinson (R) lifted an order, signed April 4, that restricted hotels and short-term rentals to authorized guests, including essential workers. The order was enacted to discourage recreational travel into Arkansas.

March 30, 2020: The Arkansas Department of Health released an advisory urging travelers from New York, New Jersey, Connecticut, New Orleans to self-quarantine for 14 days. The advisory also included international travelers.

California

As of July 15, 2020, California had not issued any travel restrictions.

Colorado

As of July 15, 2020, Colorado had not issued any travel restrictions.

Connecticut

July 14, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that New Mexico, Ohio, Wisconsin, and Minnesota had been added to the joint travel advisory originally announced June 24. Travelers from those states will need to self-quarantine for 14 days upon arriving in the tristate area. Delaware, which was added to the list July 7, has been removed. The list now includes 22 states. Gov. Cuomo also announced that visitors to New York from those 22 states will need to fill out a contact form with contact information or face a \$10,000 fine. Gov. Lamont said Connecticut would join New York in requiring visitors to fill out a form.

July 7, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that Delaware, Kansas, and Oklahoma had been added to the joint travel advisory originally announced June 24. Visitors from those states will need to quarantine for 14 days upon entering Connecticut, New York, or New Jersey. The full list of states includes Alabama, Arkansas, Arizona, California, Delaware, Florida, Georgia, Iowa, Idaho, Kansas, Louisiana, Mississippi, North Carolina, Nevada, Oklahoma, South Carolina, Tennessee, Texas, and Utah.

June 30, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that eight more states had been added to a joint travel advisory requiring out-of-state visitors to self-quarantine for 14 days. The governors announced the travel advisory June 24 and originally included Alabama, Arkansas, Arizona, Florida, North Carolina, South Carolina, Texas, and Utah. The list was expanded to include California, Georgia, Iowa, Idaho, Louisiana, Mississippi, Nevada and Tennessee.

June 24, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced on June 24 that travelers arriving in their states from states with a high infection rate must quarantine for 14 days. The infection rate is based on a seven-day rolling average of the number of infections per 100,000 residents. As of June 24, the states that meet that threshold are Alabama, Arkansas, Arizona, Florida, North Carolina, South Carolina, Texas, and Utah.

March 28, 2020: Gov. Ned Lamont (D) urged out-of-state visitors to self-quarantine.

TRAVEL INFORMATION

Delaware

June 1, 2020: Gov. John Carney (D) lifted the 14-day quarantine requirement for out-of-state travelers June 1.

May 26, 2020: Gov. John Carney Jr. (D) announced that he would end travel restrictions on out-of-state visitors on June 1.

March 29, 2020: Gov. Carney ordered an automatic two-week quarantine for anyone traveling to Delaware.

Florida

June 5, 2020: Gov. Ron DeSantis (R) announced that travelers from Louisiana would no longer need to self-quarantine for 14 days. The requirements remained in effect for visitors from Connecticut, New York, and New Jersey.

March 27, 2020: ordered all people traveling to Florida from Louisiana or an area with a widespread outbreak of COVID-19 on roadways to self-quarantine for two weeks. Those performing health, military, or emergency duties were exempt. Travelers were required to inform residents with whom they had direct contact if they traveled to an area with a widespread outbreak of COVID-19. DeSantis also instructed the Florida Department of Transportation to establish checkpoints and the Florida Highway Patrol and County Sheriffs to enforce the order. Failure to comply may result in fines up to \$500 and jail time up to 60 days.

March 24, 2020: Gov. Ron DeSantis (R) ordered travelers flying into Florida from New York, New Jersey, and Connecticut to self-quarantine for two weeks. Those performing health, military, or emergency duties were exempt. Travelers were required to inform residents with whom they had direct contact if they traveled to an area with a widespread outbreak of COVID-19. Failure to comply could have resulted in fines up to \$500 and jail time up to 60 days.

Georgia

As of July 15, 2020, Georgia had not issued any travel restrictions.

Hawaii

July 13, 2020: Gov. David Ige (D) announced that he was extending the quarantine requirement for out-of-state travelers through September 1. Previously, Ige had said a new program would take effect August 1 that would allow visitors to avoid the quarantine requirement by presenting a negative coronavirus test. The program will not start before September 1.

June 24, 2020: Gov. David Ige (D) announced that, beginning August 1, out-of-state travelers can avoid a 14-day quarantine requirement if they can present a recent negative COVID-19 test. Hawaii airports will not be providing testing. Travelers who cannot present a negative test will need to quarantine for 14 days. All travelers will still be required to fill out a travel form.

June 16, 2020: The Hawaii State Department of Health announced that it will no longer require a 14-day quarantine for inter-island travelers. However, all passengers and crew will need to fill out a travel and health form before boarding.

TRAVEL INFORMATION

June 11, 2020: Gov. Ige announced he was extending the quarantine requirement for out-of-state and returning travelers through July 31.

May 16, 2020: Gov. Ige announced he was extending the 14-day quarantine requirement for out-of-state travelers through June 30.

March 17, 2020: Ige issued an automatic two-week quarantine for people traveling to Hawaii. Ige asked would-be visitors to the state to postpone their trips for 30 days.

Idaho

May 15, 2020: Gov. Brad Little (R) announced that out-of-state visitors would no longer need to self-quarantine for 14 days upon entering Idaho. Little said people were encouraged to self-quarantine.

April 15, 2020: Gov. Little issued a travel restriction that required out-of-state visitors to self-quarantine for 14 days. The restriction was included in an extension Little issued to the stay-at-home order that went into effect March 25 and was set to expire on April 15. Workers engaged in essential activities were exempt from the order.

Illinois

As of July 15, 2020, Illinois had not issued any travel restrictions.

* July 6, 2020: Chicago Department of Public Health Commissioner Allison Arwady issued an order requiring travelers entering the city of Chicago from states experiencing a surge in COVID-19 cases to self-quarantine for 14 days. The order applied to travelers from the following states: Alabama, Arkansas, Arizona, California, Florida, Georgia, Idaho, Louisiana, Mississippi, North Carolina, Nevada, South Carolina, Tennessee, Texas, and Utah.

Indiana

As of July 15, 2020, Indiana had not issued any travel restrictions.

Iowa

March 21, 2020: Gov. Kim Reynolds (R) urged Iowans returning from out-of-state to self-quarantine for 14-days.[53]

Kansas

June 17, 2020: The Kansas Department of Health and Environment updated its list of states with widespread community transmission to include Alabama, Arizona, and Arkansas. Kansas residents who have traveled to those states will need to self-quarantine for 14 days.

May 12, 2020: The Kansas Department of Health and Environment mandated that residents who had traveled to Maryland self-quarantine for 14 days.

March 27, 2020: The Kansas Department of Health and Environment mandated residents who traveled to Colorado or Louisiana on or after March 27 to self-quarantine for two weeks.

TRAVEL INFORMATION

March 23, 2020: The Kansas Department of Health and Environment mandated residents who traveled to New Jersey or Illinois on or after March 23 to self-quarantine for two weeks.

March 18, 2020: The Kansas Department of Health and Environment mandated residents who traveled to California, Florida, New York, and Washington on or after March 15 to self-quarantine for two weeks.

Kentucky

May 6, 2020: Gov. Andy Beshear (D) ended the travel restrictions that required out-of-state travelers to quarantine.

May 6, 2020: Gov. Beshear issued a revised order restricting travel after parts of the original order were struck down by a federal judge. The new order asked out-of-state travelers to self-quarantine for 14 days if they plan on staying in the state for more than 24 hours.

May 4, 2020: A federal judge struck down parts of Gov. Beshear's travel ban, ruling the ban "does not pass constitutional muster." The lawsuit was originally filed by three churchgoers who attended a service in Louisville and were told by the state to self-quarantine.

April 2, 2020: Gov. Andy Beshear (D) issued an order requiring all people traveling to Kentucky to self-quarantine for two weeks.

March 30, 2020: Gov. Andy Beshear (D) issued an order that required residents to self-quarantine for any out-of-state travel, unless they traveled to care for a person in need, bought groceries or necessary supplies, went to work, were required by a court order, or obtained healthcare.

Louisiana

As of July 15, 2020, Louisiana had not issued any travel restrictions.

Maine

July 1, 2020: Maine Gov. Janet Mills (D) announced that she is lifting the 14-day quarantine requirement for travelers from New York, New Jersey, and Connecticut beginning July 3.

June 8, 2020: Mills announced that out-of-state visitors from New Hampshire and Vermont were no longer required to quarantine for 14 days. Beginning June 12, visitors from those states can stay in lodging establishments throughout Maine. Mills also announced that, effective July 1, visitors from all other states will need to quarantine for 14 days unless they have recently received a negative COVID-19 test. Travelers will need to fill out a Certificate of Compliance at lodging establishments, including hotels and short-term rentals.

April 3, 2020: Gov. Mills issued an executive order requiring all out-of-state travelers to self-quarantine for two weeks. Individuals providing essential services were exempt. The order directed state agencies, such as the Maine Department of Transportation and the Maine Turnpike Authority, to post the order at all major points of entry into the state. According to the order, individuals in violation of the quarantine restrictions could have been subject a penalty of up to six months in jail and a \$1,000 fine.

TRAVEL INFORMATION

Maryland

March 19, 2020: Gov. Larry Hogan (R) instructed the Maryland Transportation Authority Police to restrict traffic at BWI Marshall Airport Terminal to only ticketed passengers, those helping disabled passengers, and employees. Hogan also urged residents to limit transit use to essential travel.

Massachusetts

June 30, 2020: Gov. Charlie Baker (R) announced that visitors to Massachusetts from Rhode Island, Connecticut, Vermont, New Hampshire, Maine, New York, and New Jersey will no longer need to self-quarantine for 14 days. The advisory to self-quarantine remains in effect for visitors from other parts of the country.

March 27, 2020: Gov. Charles D. Baker (R) directed all people, except essential workers, traveling to Massachusetts to self-quarantine for two weeks. Baker also asked travelers experiencing symptoms similar to COVID-19 not to come to the state.

Michigan

As of July 15, 2020, Michigan had not issued any travel restrictions.

Minnesota

As of July 15, 2020, Minnesota had not issued any travel restrictions.

Mississippi

As of July 15, 2020, Mississippi had not issued any travel restrictions.

Missouri

As of July 15, 2020, Missouri had not issued any travel restrictions.

Montana

June 1, 2020: As part of Phase Two of the state's reopening plan, the 14-day quarantine requirement for out-of-state travelers was lifted June 1.

May 19, 2020: An updated guidance released on Montana's official state website stated that the 14-day quarantine requirement for out-of-state travelers would be lifted June 1.

March 30, 2020: Gov. Steve Bullock (D) issued an executive order requiring residents and non-residents traveling to Montana, except those traveling for work, to self-quarantine for two weeks. The order also instructed the Montana National Guard to conduct temperature checks and exposure risks inquiries at airports and rail stations in the state.

TRAVEL INFORMATION

Nebraska

March 24, 2020: At his daily press briefing, Gov. Pete Ricketts (R) asked residents who traveled to a country or a state with a widespread COVID-19 outbreak to self-quarantine for two weeks. This was a recommendation and not legally binding.

Nevada

March 31, 2020: Gov. Steve Sisolak issued a travel advisory asking out-of-state visitors to self-quarantine for 14 days. The advisory was not enforceable by law.

New Hampshire

March 28, 2020: Gov. Chris Sununu (R) requested people traveling to New Hampshire for reasons other than same-day trips for work, care of a loved one, or for essential supplies to self-quarantine for two weeks.

New Jersey

July 14, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that New Mexico, Ohio, Wisconsin, and Minnesota had been added to the joint travel advisory originally announced June 24. Travelers from those states will need to self-quarantine for 14 days upon arriving in the tristate area. Delaware, which was added to the list July 7, has been removed. The list now includes 22 states.

July 7, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that Delaware, Kansas, and Oklahoma had been added to the joint travel advisory originally announced June 24. Visitors from those states will need to quarantine for 14 days upon entering Connecticut, New York, or New Jersey. The full list of states includes Alabama, Arkansas, Arizona, California, Delaware, Florida, Georgia, Iowa, Idaho, Kansas, Louisiana, Mississippi, North Carolina, Nevada, Oklahoma, South Carolina, Tennessee, Texas, and Utah.

June 30, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that eight more states had been added to a joint travel advisory requiring out-of-state visitors to self-quarantine for 14 days. The governors announced the travel advisory June 24 and originally included Alabama, Arkansas, Arizona, Florida, North Carolina, South Carolina, Texas, and Utah. The list was expanded to include California, Georgia, Iowa, Idaho, Louisiana, Mississippi, Nevada and Tennessee.

June 24, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced on June 24 that travelers arriving in their states from states with a high infection rate must quarantine for 14 days. The infection rate is based on a seven-day rolling average of the number of infections per 100,000 residents. As of June 24, the states that meet that threshold are Alabama, Arkansas, Arizona, Florida, North Carolina, South Carolina, Texas, and Utah.

TRAVEL INFORMATION

New Mexico

Does New Mexico have restrictions on travel? Yes. All out-of-state travelers are required to self-quarantine for 14 days upon entering the state. The requirement does not apply to essential workers, airline staff, or military personnel.

More information can be found at the New Mexico Tourism Department website.

Timeline

June 30, 2020: Gov. Michelle Lujan Grisham (D) extended the stay-at-home order and the mandatory 14-day quarantine for all out-of-state travelers. Essential workers, including airline employees and military personnel, are exempt from the quarantine requirement.[85]

May 28, 2020: Gov. Grisham announced the limited reopening of some businesses as part of New Mexico's reopening plan. The new order, which goes into effect June 1, also modifies the quarantine requirement for out-of-state travelers to permit some business travel.[86]

March 27, 2020: Gov. Grisham signed an executive order requiring all travelers who entered New Mexico through an airport to self-quarantine for 14 days. The order directed the New Mexico Department of Health to work with other state agencies to ensure visitors who enter through an airport self-quarantine. The order did not apply to essential workers, including airport or airline personnel.[87]

New York

July 14, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that New Mexico, Ohio, Wisconsin, and Minnesota had been added to the joint travel advisory originally announced June 24. Travelers from those states will need to self-quarantine for 14 days upon arriving in the tristate area. Delaware, which was added to the list July 7, has been removed. The list now includes 22 states. Gov. Cuomo also announced that visitors to New York from those 22 states will need to fill out a contact form with contact information or face a \$10,000 fine. Gov. Lamont said Connecticut would join New York in requiring visitors to fill out a form.

July 7, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that Delaware, Kansas, and Oklahoma had been added to the joint travel advisory originally announced June 24. Visitors from those states will need to quarantine for 14 days upon entering Connecticut, New York, or New Jersey. The full list of states includes Alabama, Arkansas, Arizona, California, Delaware, Florida, Georgia, Iowa, Idaho, Kansas, Louisiana, Mississippi, North Carolina, Nevada, Oklahoma, South Carolina, Tennessee, Texas, and Utah.

June 30, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced that eight more states had been added to a joint travel advisory requiring out-of-state visitors to self-quarantine for 14 days. The governors announced the travel advisory June 24 and originally included Alabama, Arkansas, Arizona, Florida, North Carolina, South Carolina, Texas, and Utah. The list was expanded to include California, Georgia, Iowa, Idaho, Louisiana, Mississippi, Nevada and Tennessee.

June 24, 2020: Govs. Ned Lamont (D-Conn.), Phil Murphy (D-N.J.), and Andrew Cuomo (D-N.Y.) announced on June 24 that travelers arriving in their states from states with a high infection rate must quarantine for 14 days. The infection rate is based on a seven-day rolling average of the number of

TRAVEL INFORMATION

infections per 100,000 residents. As of June 24, the states that meet that threshold are Alabama, Arkansas, Arizona, Florida, North Carolina, South Carolina, Texas, and Utah.

North Carolina

As of July 15, 2020, North Carolina had not issued any travel restrictions.

North Dakota

May 8, 2020: Mylynn Tufte, the State Health Official, issued an amended confinement order which requires only international visitors to North Dakota to self-quarantine for 14 days.

March 28, 2020: State Health Official Mylynn Tufte issued an order directing people traveling to North Dakota from another country or from a state classified by the Centers for Disease Control and Prevention as having widespread COVID-19 outbreak to self-quarantine for two weeks. Certain essential workers were exempt.

Ohio

April 2, 2020: The state's stay-at-home order includes a request that out-of-state travelers self-quarantine for 14 days.

Oklahoma

May 11, 2020: The requirement for out-of-state travelers from New York, New Jersey, Connecticut, California, Louisiana, and Washington to self-quarantine for 14 days ended with the release of Gov. Kevin Stitt's (R) Amended Executive Order 2020-13, which went into effect May 12. Amended Executive Order 2020-13 called for out-of-state travelers to adhere to all CDC recommendations.

March 29, 2020: Gov. Kevin Stitt (R) issued an amendment to Executive Order 2020-07 requiring people entering Oklahoma from New York, New Jersey, Connecticut, California, Louisiana, and Washington to self-quarantine for two weeks.

Oregon

As of July 15, 2020, Oregon had not issued any travel restrictions.

Pennsylvania

July 2, 2020: The Pennsylvania Department of Health recommended that residents who travel to 15 states with rising COVID-19 cases quarantine for 14 days upon returning to Pennsylvania. The states include Alabama, Arizona, Arkansas, California, Florida, Georgia, Idaho, Louisiana, Mississippi, Nevada, North Carolina, South Carolina, Tennessee, Texas, and Utah.

April 13, 2020: The Pennsylvania Department of Health recommended that out-of-state travelers, especially those from areas with high rates of infection or community spread, self-quarantine for 14 days.

TRAVEL INFORMATION

Rhode Island

June 30, 2020: Out-of-state visitors and Rhode Island residents traveling to Rhode Island from parts of the country with a positive coronavirus test rate of 5% or higher will need to provide a negative test result or quarantine for 14 days.

March 28, 2020: Gov. Gina Raimondo (D) issued an executive requiring any person traveling to Rhode Island for any reason other than employment to automatically self-quarantine for two weeks. Residents who can work from home are required to do so. If a resident was unable to telecommute, they needed to self-quarantine when not at work. Public health, public safety, and healthcare workers were exempt.

South Carolina

May 1, 2020: Gov. Henry McMaster (R) announced he was lifting the executive order requiring visitors from Connecticut, New York, New Jersey, and New Orleans to self-quarantine for two weeks.

March 27, 2020: McMaster issued an executive order requiring people traveling to South Carolina from Connecticut, New York, New Jersey, and New Orleans to self-quarantine for two weeks. Failure to do so could have resulted in \$1,000 in fines and up to one month in jail.

South Dakota

As of July 15, 2020, South Dakota had not issued any travel restrictions.

Tennessee

As of July 15, 2020, Tennessee had not issued any travel restrictions.

Texas

May 21, 2020: Gov. Greg Abbott (R) ended quarantine requirements for out-of-state travelers.[106]

April 26, 2020: Abbott issued a new executive order lifting restricting on out-of-state travelers from Louisiana. Travelers from the remaining states on the list still needed to self-quarantine for 14 days upon entering Texas.

March 29, 2020: Gov. Greg Abbott (R) issued an executive order requiring people traveling into Texas on roadways from Louisiana or other states and cities determined thereafter self-quarantine for two weeks. Vital workers, determined by the Texas Division of Emergency Management, were exempt. Those who qualified for quarantine needed to fill out a form provided by the Texas Department of Public Safety. Failure to comply could have resulted in a \$1,000 fine and or jail time up to 180 days. The order went into effect March 30.

March 26, 2020: Gov. Greg Abbott (R) issued an executive order requiring people flying to Texas from New York, New Jersey, Connecticut, or New Orleans self-quarantine for two weeks. California, Louisiana, Washington, Atlanta, Chicago, Detroit, and Miami were later added. Vital workers, determined by the Texas Division of Emergency Management, are exempt. Those who qualify for quarantine must fill out a form provided by the Texas Department of Public Safety. Failure to comply could have resulted in a \$1,000 fine and or jail time up to 180 days. The order went into effect March 28.

TRAVEL INFORMATION

Utah

May 1, 2020: The requirement that out-of-state visitors fill out a travel declaration upon entry expired. Travelers to parts of Utah in the "moderate risk" phase of the reopening plan who have come from a high-risk area or situation are required to self-quarantine for 14-days.

April 8, 2020: Gov. Gary Herbert (R) issued an order requiring all visitors over the age 18 who enter Utah through airports or roadways to complete a travel declaration within three hours of entering the state. Drivers entering Utah would receive a text message with a link to the form, whereas travelers in the airport would receive a card from an airport employee with instructions to fill out a form online. The form required travelers to answer a number of questions related to COVID-19 symptoms and travel history.

Vermont

June 26, 2020: Beginning July 1, out-of-state visitors arriving from low-risk counties in Pennsylvania, New Jersey, Delaware, Maryland, Washington D.C., Virginia, and West Virginia in a personal vehicle will no longer need to quarantine for 14-days after arriving in Vermont. Vermont residents who visit those counties and then return home will also no longer need to quarantine.

June 5, 2020: Gov. Phil Scott (R) announced that the quarantine requirement will be lifted for out-of-state travelers from counties across New England with similar COVID-19 caseloads to Vermont starting June 8. The Agency of Commerce and Community said it would release a map June 8 at 5 p.m. identifying quarantine and non-quarantine counties. Additionally, Vermont residents will be allowed to travel to the non-quarantine counties and return home without quarantining for 14 days.

March 30, 2020: Gov. Scott issued an addendum to Executive Order 01-20 requiring all residents and non-residents traveling to Vermont to self-quarantine for two weeks. Those traveling for essential purposes were exempt. According to the order, essential purposes were defined as traveling for safety, food, beverages, medicine, healthcare, care for others and essential work outlined in Stay Home/Stay Safe order. Scott also asked would-be travelers displaying symptoms or coming from an area with a widespread outbreak of COVID-19 not to enter Vermont. A reevaluation for the order was set for April 15.

Virginia

June 12, 2020: The Virginia Department of Health no longer recommends that out-of-state travelers from areas with high rates of community spread self-quarantine for 14 days. The recommendation remains in place for people who have traveled internationally or on a cruise ship or river boat.

May 4, 2020: The Virginia Department of Health recommended that visitors or residents who have traveled internationally, or on a cruise ship or river boat, or to an area of the U.S. with high rates of community spread, to self-quarantine for 14 days.

Washington

As of July 15, 2020, Washington had not issued any travel restrictions.

TRAVEL INFORMATION

West Virginia

May 21, 2020: Gov. Jim Justice (R) ended the order requiring out-of-state travelers to self-quarantine for 14 days.

March 31, 2020: Gov. Justice issued an executive order requiring all non-residents traveling to West Virginia from a COVID-19 hotspot self-quarantine for two weeks. The order instructed West Virginia State Police to monitor roadways for such possible travelers. Those traveling for essential business were exempt. Failure to comply with the order could have resulted in fines up to \$500 and jail time no more than one year.

Wisconsin

April 19, 2020: The Wisconsin Department of Health Services urged Wisconsin residents returning from outside their communities, including from out-of-state, to self-quarantine for 14 days.

Wyoming

May 7, 2020: Gov. Mark Gordon (R) announced that out-of-state travelers will no longer need to quarantine for 14 days.

April 3, 2020: Gordon extended restrictions on businesses and individuals through the end of April. At the same time, he issued a new order requiring out-of-state travelers to self-quarantine for 14 days.

TRAVEL INFORMATION

TIMELINE OF FEDERAL TRAVEL RESTRICTIONS

To read about other federal responses to the coronavirus pandemic, [click here](#).

- June 16, 2020: Acting Secretary of Homeland Security Chad Wolf announced that the U.S. would keep restrictions limiting non-essential travel to or from Mexico and Canada in place through July 21.
- May 24, 2020: President Donald Trump issued a proclamation suspending entry into the U.S. of foreign nationals who had been in Brazil at any point in the previous 14 days.
- May 19, 2020: Acting Homeland Security Secretary Chad Wolf announced the U.S. would extend travel restrictions in place at the Canadian and Mexican borders another 30 days to reduce the spread of the coronavirus. The restrictions were enacted in late March in cooperation with both countries and extended for an additional 30 days on April 20. Essential travel, including for trade and commerce, is still allowed, but travel for tourism or recreation is prohibited.
- April 20, 2020: Acting Homeland Security Secretary Chad Wolf announced that travel restrictions with Canada and Mexico would be extended another 30 days. The restrictions, implemented in agreement with Canada and Mexico in late March, prohibit nonessential travel.
- March 20, 2020: The United States and Mexico mutually agreed to close the border to non-essential traffic.
- March 17, 2020: The United States and Canada mutually agreed to close their border to non-essential traffic.
- March 14, 2020: Trump issued a proclamation suspending entry into the U.S. of foreign nationals who had been in the United Kingdom at any point in the previous 14 days.
- March 11, 2020: Trump issued a proclamation suspending entry into the U.S. of foreign nationals who had been in the Schengen Area of the European Union at any time in the previous 14 days. The Schengen Area comprises 26 European countries.
- February 29, 2020: Trump issued a proclamation suspending entry into the U.S. of foreign nationals who had been in Iran at any point in the previous 14 days.
- January 31, 2020: Trump issued a proclamation suspending entry into the U.S. of foreign nationals who had been in mainland China at any point in the previous 14 days. The proclamation took effect February 2.

TRAVEL INFORMATION

CORONAVIRUS RETAIL RESTRICTIONS BY STATE (as of 7/14/2020)

The following is an **excerpt from an Excel spreadsheet included with this document** (*Coronavirus Retail Restrictions by State_07142020.xlsx*) providing guidance on business closures, employee screening, facial coverings, mass gatherings, school closures, sheltering, covid related curfew, school closures, quarantine after travel, etc. This document is extensive and would be approx. 90+ pages printed. The spreadsheet, however, allows a user to easily filter by state or category.

Note: "Quarantine After Travel" rows have been colored yellow!

Jurisdiction	Category	Summary of Restrictions as of 7/14/2020
New York	Facial Coverings	Under released guidance for industries permitted to open in Phases I, II, and III, employers must provide employees with acceptable face covering at no cost to employees. (For personal care services, open in Phase III, customers may only enter the business if they have a mask on -- exceptions for those under 2 and those with medical conditions.) See industry-specific requirements. Person conducting symptom screening each day must wear a mask. Under EO 202.16 directing employers to provide masks to Essential Employees who interact with the public at no cost to employees. Essential Employees must wear face coverings when in direct contact with customers or the public. Under EO 202.17 requiring all individuals over the age of two (and who are able to medically tolerate a face covering) to cover their nose and mouth with a mask or cloth face-covering when in a public place and unable to maintain a six-foot distance from others. Under EO 202.34, businesses are empowered to refuse service to those not wearing face coverings. If the person says they cannot wear a face covering due to a medical issue, the business must discuss possibility of reasonable accommodation such as face shields or other types of face coverings.
New York	Mass Gatherings	Non-essential gatherings of up to 25 people allowed in Phase 3 -- 50 people in Phase 4. (If indoors, cannot exceed 50% of space capacity.) Outdoor, socially distanced graduations of up to 150 people will be allowed beginning 6/26/2020.
New York	PPE Requirements	Under released guidance for industries permitted to open in Phases I, II, and III, employers must provide employees with acceptable face covering at no cost to employees. (For personal care services, open in Phase III, customers may only enter the business if they have a mask on -- exceptions for those under 2 and those with medical conditions.) See industry-specific requirements regarding when PPE is required v. recommended. Person conducting symptom screening each day must wear a mask. Governor issues EO 202.16 directing employers to provide masks to Essential Employees who interact with the public at no cost to employees. Essential Employees must wear face coverings when in direct contact with customers or the public. Governor issues EO 202.17 requiring all individuals over the age of two (and who are able to medically tolerate a face covering) to cover their nose and mouth with a mask or cloth face-covering when in a public place and unable to maintain a six-foot distance from others. Governor issues EO 202.34, businesses are empowered to refuse service to those not wearing face coverings. If the person says they cannot wear a face covering due to a medical issue, the business must discuss possibility of reasonable accommodation such as face shields or other types of face coverings.
New York	Quarantine After Travel	Update 7/14/2020: 4 more states added to list of Restricted States (Minnesota, New Mexico, Ohio, and Wisconsin) -- and 1 removed (Delaware). As of 7/14/2020, the list of 22 states captured by the 14-day quarantine requirement includes: Alabama, Arkansas, Arizona, California, Florida, Georgia, Idaho, Iowa, Kansas, Louisiana, Minnesota, Mississippi, Nevada, New Mexico, North Carolina, Ohio, Oklahoma, South Carolina, Tennessee, Texas, Utah, and Wisconsin. Governor announced that, beginning 7/14/2020, travelers to New York from the states on the Restricted States list will be required to fill out a form documenting where they're coming from and their local contact information after they exit the plane or face a penalty of up to \$2,000. (See Source 2). Place on form for Essential Workers to indicate that they are Essential and so exempted from quarantine requirement. Effective June 25, 2020, persons traveling into New York from a state with a daily positive test rate higher than 10 per 100,000 residents or a 10% or higher positivity rate on a 7-day rolling average, are directed to self-quarantine for a 14-day period from the time of last contact within the identified state. (Applies to some business travel (see exemption) and applies to residents of NY who travel to a restricted state and return home.) Connecticut and New Jersey also issue Travel Advisory. Each state is responsible for its own enforcement. In New York, Governor Cuomo indicated those violating the quarantine could be subject to a judicial order mandating quarantine, and fines of \$2,000 for the first violation, \$5,000 for the second violation, and \$10,000 if causes harm.

TRAVEL INFORMATION

#2 – AIRPORT RESTRICTIONS AND GUIDELINES

TRANSPORTATION SECURITY ADMINISTRATION (TSA)

TSA Response to COVID-19

TSA understands that the novel coronavirus (COVID-19) continues to weigh heavily on the minds of travelers and the public. We have established this webpage to provide resources and information to assist passengers who find they must travel during this challenging time. TSA remains dedicated to our mission of ensuring that travelers get to their destinations as safely and securely as possible. For the latest press releases and statements related to COVID-19, please visit our media page.

Traveling During the COVID-19 Pandemic

Travelers are reminded to follow the Centers for Disease Control and Prevention (CDC) travel guidance regarding COVID-19. Travelers are also encouraged to:

- Practice good hygiene, such as washing your hands regularly, including directly before and after completing the security screening process.
- Maintain a social distance of six feet wherever possible.
- Remove belts and all personal items from your pockets such as wallets, keys or phones before you enter the checkpoint queue and place them in your carry-on bag. (Does not apply to TSA PreCheck™ members.)
- Wear a face covering during the screening process. You may be asked to adjust your mask for ID verification or to remove it for secondary screening.
- Remove food items from carry-on bags and place in bin for screening. (Does not apply to TSA PreCheck™ members.)

Travelers may be directed outside of the checkpoint to remove or repack items (e.g., laptops, liquids, gels, aerosols and large electronics).

Employees or travelers who believe they may have been in contact with a person who has COVID-19 should consult with their healthcare provider. Employees or travelers who have tested positive for COVID-19 should seek medical attention and follow the guidance of their healthcare provider and local health department.

Security Checkpoints

While security is TSA's top priority, the health and safety of our employees and the traveling public is of utmost importance to us. TSA remains in close communication with medical professionals, the CDC, and various government agencies as we continue to carry out our important mission. Below are some adjustments TSA has made at checkpoints to make the security screening process safer:

- **Passenger Volumes**
 - TSA is consolidating its screening operations to adjust for reduced flight and passenger volumes. Impacted security checkpoints may close as a result, so passengers may be

TRAVEL INFORMATION

- redirected to other security screening checkpoints at the airport. View a comparison of TSA checkpoint screening numbers for 2019 and 2020.

- **Social Distancing**

TSA has implemented procedures to increase social distancing and reduce direct contact between our employees and the traveling public whenever possible – without compromising security. Adjustments include increasing distance between passengers as they enter the security checkpoint queue, placing visual reminders of appropriate spacing on checkpoint floors, and staggering the use of lanes in the security checkpoint where feasible.

- **Reduced Physical Contact**

TSA is implementing a phased installation of plastic shielding at points of interaction between passengers and TSA officers (e.g., checkpoint, checked baggage drop-off, etc.). Also, travelers maintain possession of their IDs and boarding passes, place on the reader, and hold up to the TSA officer for visual inspection.

- **Personal Protective Equipment**

TSA officers are required to wear face coverings and gloves. They may also choose to wear eye protection or clear plastic face shields. In addition, TSA officers change their gloves following each pat-down and upon passenger request.

- **Cleaning and Disinfecting**

TSA has increased the frequency and intensity of cleaning and disinfecting of frequently touched surfaces and security screening equipment, including bins. TSA officers also use new Explosives Trace Detection swabs for each person.

- **Medical Exemption for Hand Sanitizer**

TSA is allowing one liquid hand sanitizer container, up to 12 ounces per passenger, in carry-on bags until further notice. Since these containers exceed the standard allowance typically permitted through a checkpoint, they will need to be screened separately. This will add some time to your checkpoint screening experience. Please keep in mind that all other liquids, gels and aerosols brought to a checkpoint continue to be limited to 3.4 ounces or 100 milliliters carried in a one quart-size bag. TSA's special procedures for traveling with medication.

- **Expired Driver's License and REAL ID Extension**

If your driver's license or state-issued ID expired on or after March 1, 2020, and you are unable to renew at your state driver's license agency, you may still use it as acceptable identification at the checkpoint. TSA will accept expired driver's licenses or state-issued ID a year after expiration. DHS recently announced an extension of time to obtain a REAL ID-compliant driver's license. The new deadline is October 1, 2021. Learn more on TSA's REAL ID webpage.

TRAVEL INFORMATION

AIRPORT RESTRICTIONS AND GUIDELINES

AIRPORT - GENERAL

Most Airports have recommended the following for passengers. This list is not all inclusive and airports may differ slightly by being more relaxed or more stringent:

- **FACE MASKS:** All passengers and guests should wear face masks while at the Airport in any capacity.
- **ARRIVE EARLY:** Passengers should plan to arrive at the airport at least two hours before departure to help prevent crowding caused by last-minute rushing before scheduled flights.
- **LIMIT TOUCHPOINTS:** Travelers should use carry-on luggage and mobile boarding passes to limit touchpoints.
- **TRAVELERS ONLY:** Those picking up or dropping off passengers should not enter the Main Terminal; instead they should use the Cell Phone Lot or stay in their vehicles in the Short Term Garage unless they are assisting unaccompanied minors, passengers with disabilities, or others who need assistance.
- **LIMITED AMENITIES:** Some facilities and amenities may not be available or have reduced capacity and will reopen in phases when it is safe to do so. Travelers should check on the availability of parking, dining, shopping and amenities before coming to the airport.

Most Airports are implementing the following health and safety measures:

- **PLASTIC SHIELDS:** Plastic or acrylic shields have been installed in key high-traffic areas, including ticket counters, TSA security checkpoints, boarding gate and concessions counters.
- **FACE MASKS:** All employees are required to wear face masks.
- **SOCIAL DISTANCING MARKERS:** Thousands of ground markings and signs are in place to give guidance on six-foot distancing at ticket counters, boarding gates, shuttles, concessions counters, US Customs, and other common areas.
- **REDUCED SEATING:** Seating has been reduced, blocked off or spaced apart in places like gate areas, dining areas, workstations and Main Terminal greeting sections to promote distancing.
- **CLEANING AND SANITATION:** TPA has employed additional cleaning staff, using cutting-edge disinfection applications and products on surfaces, handrails and elevator buttons, and adding more hand sanitizers throughout the Airport.

TRAVEL INFORMATION

Helpful Tips

- Wear a mask
- Avoid using checkpoint bins – place your items inside carryon
- Wash hands upon leaving the checkpoint
- Avoid restaurants/bars
- Find an isolated area to kill time prior to the gate
- If you select a seat at the gate (or anywhere within the airport), use your disinfectant wipe to sanitize the seat/area
- To avoid power charging areas, get a good 10,000 mAh powerbank to charge your phone, etc. 20,000 mAh banks are small now and provide several full chargings of a phone (a phone battery typically ranges from 2300 mAh to 4000 mAh)
- Many airlines are limiting service in-flight, purchase water, etc. prior to boarding

State and local governments in the U.S. have implemented a range of travel requirements related to COVID-19. If you are traveling from certain areas within the U.S., you may be required to self-quarantine for 14 days from the time you arrive, or the duration of your trip (whichever is shorter). Keep in mind that travel requirements are updated often, so it is recommended to check city and state websites before your trip for the latest information.

TRAVEL INFORMATION

#3 – AIRLINE RESTRICTIONS AND GUIDELINES

AMERICAN AIRLINES

Latest News

American announced it would begin booking flights to capacity starting July 1, meaning that those middle seats will also now be available for purchase.

Beginning June 30, American will ask all travelers during check-in to confirm they have been free of COVID-19 symptoms for the past 14 days. Staying home is the best way to protect yourself and others from getting sick.

Change Fees

American is extending the offer to waive change fees on existing and new tickets for summer travel through September 30, 2020. This offer includes Basic Economy and AAdvantage® award tickets.

- Keep in mind:
 - You may owe any difference in ticket price when you rebook your trip.
 - You're allowed to change your origin and destination cities as part of this offer.
 - If you rebook, travel must be completed by December 31, 2021.
 - Plus, if you have a ticket that is expiring between March 1 and September 30, 2020, the value of your unused ticket can be used for travel through December 31, 2021.
 - You can make a change to your trip once, and the change fee will be waived. You can cancel your trip online and call later when you are ready to rebook, including Basic Economy tickets for travel on or before September 30, 2020.
- For new tickets booked between now and July 31, 2020, we're expanding our offer to waive change fees for travel October 1, 2020, and later. This offer includes Basic Economy tickets.
- Keep in mind:
 - You may owe any difference in ticket price when you rebook your trip.
 - You're allowed to change your origin and destination cities as part of this offer.

Face Covering

A face covering is required while flying on American, except for very young children or anyone with a condition that prevents them from wearing one. You also may be required by local law to wear a face covering in the airport where your trip begins, where it ends or where you connect.

- Please bring your own face covering to use while traveling. While limited quantities of face coverings may be available at the gate, they will not be available for every customer on every flight.
- Be sure your face covering is on before you board the plane and wear it during your flight.
- Your face covering may be removed to eat or drink, but please put it back on when you are done.

TRAVEL INFORMATION

General

- Expect continual flight schedule changes based upon demand.
- Curbside check-in may not be available. Be sure to check your flight status before you go to the airport, as ticket counter hours may change daily without notice.
- Due to the increased flight changes, the airline has stopped checking pets for now. Carry-on pets, service and emotional support animals are still allowed to fly in the cabin if they meet the requirements.
- The airline has temporarily closed and consolidated premium clubs and lounges. Operating hours for clubs that remain open may change based on flight schedules.

On Aircraft

- The airline may restrict seating to provide better spacing and/or re-assign your seat to create a more comfortable environment – however, this is not guaranteed .
- Limited service (snacks, drinks).
- Aircraft undergo a deep cleaning procedure on a regularly scheduled basis.
- Expanded the comprehensive cleaning package used during longer stops to every mainline flight. This will include cleaning customer areas like tray tables and seatbelt buckles and team member areas like galleys and cockpit surfaces.
- Use of additional electrostatic spraying to disinfect our planes with an EPA-registered hospital-grade disinfectant on both hard and soft surfaces.
- Most aircraft have High-Efficiency Particulate Air (HEPA) filters that provide a complete air change approximately 15 – 30 times per hour.
- All flight attendants will be required to wear masks on all flights. Every flight we operate will be supplied with masks and other sanitizing items for crew members.

TRAVEL INFORMATION

DELTA AIRLINES

Latest News

Delta has extended their commitment to make more space for safer travel by blocking the selection of middle seats and capping seating in every cabin through September 30th. Seating is capped at: 50% in First Class and Delta One cabins with one aisle; 60% in Main Cabin, Delta Comfort+, and Delta Premium Select; and 75% in Delta One cabins with two aisles.

Change Fees

- Delta is waiving change fees and Award redeposit fees for travel impacted by coronavirus. This applies to domestic and international travel departing March through September 30, 2020, as well as all tickets purchased between March 1 and July 31, 2020.
- If your travel is eligible for a waiver, you can move your travel dates and even select a new destination. Your unused ticket will be applied toward your new flight, and in some instances a fare difference will apply. If the new fare is lower, you will receive an eCredit for the difference. If the new fare is higher, the difference will be collected. The fare difference will be waived for changes to existing travel between March - Sept 2020 if originally purchased before April 17th and traveling to the same destination before September 30, 2020.

Face Covering

- Masks, or appropriate face coverings will be required for all Delta employees and customers starting at the check-in lobby and across Delta touchpoints including Delta Sky Clubs, boarding gate areas, jet bridges and on board the aircraft for the duration of the flight, aligning with best practice guidelines from the CDC.

General

- All customers must wear a mask or face covering, and extra masks and wellness kits will be available at check-in if you need one.
- Kiosks are being wiped down and sanitized frequently throughout the day.
- Hand sanitizer dispensers have been added near high traffic and high-touch locations.
- All employees are required to wear masks or face coverings.
- Plexiglass shields are being added at all Delta counters that are staffed with an Agent throughout the airport.
- Baggage stations where bags are located before they are loaded onto aircraft, are being wiped down and sanitized throughout the day.
- Floor decals are being added to provide guidance for maintaining a safe distance while in line.

TRAVEL INFORMATION

On Aircraft

To make space for safer travel, the following temporary changes will be implemented on all Delta-operated flights through September 30, 2020:

- Blocking middle seats in all cabins on all aircraft, and blocking select aisle seats in aircraft with 2x2 seating configurations.
- Reducing the total number of passengers in each cabin to 50% in First Class and domestic Delta One; 60% in Main Cabin, Delta Comfort+ and Delta Premium Select; and 75% in international Delta One.
- Modifying our boarding process to board by row, starting from the rear of the aircraft to the front. Delta One, First Class and Diamond Medallion customers may board at any point during the boarding process.
- On June 10, Delta resumed automatic, advance Medallion Complimentary Upgrades to Delta One (domestic U.S.), First Class and Delta Comfort+ that were previously managed at the gate. Subject to availability, and as permitted by our seating caps.
- Additionally, on select routes where customer demand is approaching our seating-caps, Delta will look for opportunities to upgrade to larger aircraft or add more flying to promote space onboard.
- Limited service (snacks, drinks)..
- Aircraft in Delta's fleet feature either a state-of-the-art air circulation system with HEPA filtration or a system that pulls fresh air in from the outside to replace cabin air. HEPA air filters extract more than 99.999% of even the tiniest viruses, including coronaviruses.

TRAVEL INFORMATION

UNITED AIRLINES

Change Fees

- To help with uncertainty around future travel, you now have until July 31 to change or cancel any flights with travel dates through the end of the year without change fees. For additional flexibility, if you make a new flight booking by July 31, you'll be able to change or cancel with no change fee.
- You may be able to request a refund online or by contacting us if your flight has been affected by a significant schedule change or if your flight was canceled without another option.

Face Covering

- For everyone's safety, all United travelers are required to wear a face covering for their entire flight, unless they're eating or drinking. United representatives will have masks available for those who need one. Travelers who aren't wearing their masks could lose their travel privileges on future United flights.
- Certain travelers, like small children, travelers with medical conditions or disabilities that prevent them from wearing a face covering, and those who cannot remove or put on a face covering, aren't required to wear one on board.

General

- Requiring all travelers to wear a face covering during their entire flight unless they're eating or drinking. Travelers who aren't wearing their face coverings on board could lose their travel privileges on future United flights. Certain travelers are exempt from this requirement. Before your flight, look over the FAQs about face coverings.
- Adding a step to the check-in process that requires you to acknowledge you don't have symptoms for COVID-19 and agree to follow our policies.
- Reducing touchpoints by temporarily shutting down self-service kiosks, asking you to scan your boarding pass and encouraging you to use [united.com](https://www.united.com) or the United app.
- Installing sneeze guards at key interaction points like baggage and check-in counters.
- Introducing an "all-in-one" snack bag that includes a wrapped sanitizer wipe, 8.5-ounce bottled water, stroopwafel and package of pretzels. For domestic flights between 1 hour and 2 hours and 20 minutes, you'll receive this snack bag if you're in a premium cabin. For domestic flights that are 2 hours and 20 minutes or longer, we'll offer this snack bag to everyone on board.
- Boarding fewer customers at a time and boarding back to front by rows after pre-boarding.
- For regularly scheduled flights that are expected to be fairly full, letting you change your flight with no change fee or receive a travel credit for your trip. We'll do our best to contact you about 24 hours before your departure time so you can decide before you arrive at the airport. Please note the number of travelers on each flight may change.
- Minimizing contact between our agents and customers by creating a 6-foot rule at ticket counters.
- Providing pillows and blankets upon request on international flights out of our hub airports.

TRAVEL INFORMATION

On Aircraft

- Disinfecting high-touch areas like arm rests, door handles, lavatories, seatback screens and seat belts.
- Equipping employees with hand sanitizer and other supplies.
- Providing hand sanitizer wipes as you board the aircraft.
- Ensuring our aircraft cleaning standards meet, and in many cases exceed, Centers for Disease Control
- Using electrostatic spraying on all aircraft before departure for enhanced cabin sanitation. See how
- Using state-of-the-art high-efficiency (HEPA) filters on all United aircraft to circulate air and remove at least 99.97% of airborne particles.

TRAVEL INFORMATION

SOUTHWEST AIRLINES

Change Fees

If you decide not to travel, as long as you cancel your flight at least 10 minutes before its scheduled departure, the funds used to pay for a nonrefundable ticket (Wanna Get Away® fares) are normally valid for one year from the date of purchase. However, in recognition of the current travel environment, we are extending the expiration date of some travel funds:

- Customers' funds that have expired or will expire between March 1, 2020 and September 7, 2020, will now expire September 7, 2022.
- Any travel funds created because you cancel a flight between March 1 – September 7, 2020, will expire September 7, 2022.

It can take up to five business days for the new expiration date to appear in your account. It will also take our Technology Team a few days to make these changes.

It's important to note, while these unused travel funds will be available until September 7, 2022, once the funds are used to make a purchase, the expiration date of the travel funds will then follow our normal ticketing rules and will expire 12 months from the date of purchase.

For example:

- Your original unused travel funds with confirmation number OLD111 expired on March 19, 2020.
- These unused travel funds were extended to an expiration date of September 7, 2022.
- You use some of those funds on August 1, 2020 to book new travel in September under confirmation number NEW111.
- If for some reason you need to cancel this new flight, your unused travel funds associated with confirmation number NEW111 will be valid for 12 months from the booking date which means they will expire August 1, 2021.
- Any remaining unused travel funds tied to OLD111 will be available through September 7, 2022.

We have also added a new benefit for our valued Rapid Rewards Members. Those Members who have travel funds that are set to expire or funds that are created between March 1, 2020 and September 7, 2020 will have the option to convert those travel funds into Rapid Rewards points at the same rate you would be able to purchase a ticket with points today. We hope this provides our Members ultimate flexibility as Rapid Rewards points never expire, never have cancel or change fees (fare difference may apply), and you can redeem your points for anyone you choose.

Our Technology Team is working to build this conversion capability, and we will be in touch when it is ready for you to use. In the meantime, you don't need to take any action—your travel funds will be automatically extended for the two years mentioned above, and you will be able to make this conversion once we bring this new functionality to fruition.

TRAVEL INFORMATION

Face Covering

- In accordance with the current CDC guidance, Customers are required to wear a face covering over their nose and mouth at all times during their Southwest travel experience—while checking in, boarding, inflight, deplaning, retrieving baggage; and any other time they may engage with a Southwest Employee or another Customer. Customers are required to wear a face covering in order to board the plane. (Began May 22).
- There may also be times when a Customer needs to temporarily remove their face covering, for instance, to eat or drink. However, we expect Customers to put their face covering back on as soon as possible.
- Customers should also remove face coverings if a decompression event occurs and they are asked to use an oxygen mask, or in the event a Customer is supporting an onboard emergency, like performing CPR.

General

The well-being of our Employees, as well as Customers, is our top priority. We are implementing the following safeguards for our Teams:

- We are providing masks to all Customer-facing Employees. They are required to wear masks or face coverings anytime while serving Customers. Employees will not be required to wear masks while they are on break in the galley or terminal, unless they are unable to maintain a physical distance or required by a local, state, or federal order.
- We have installed Plexiglas® barriers in the following areas: Ticket counters (bag drop and full-service locations), gate podiums, and baggage service offices.
- The ticket counters, gates, and baggage claim areas are being cleaned multiple times a day.
- We have modified our boarding process to promote physical-distancing. We are now boarding in groups of 10 and only on one side of our boarding poles to help Customers spread out.
- You will see airport signage and floor markers that encourage physical-distancing in the gate areas. (Began early May).
- Family boarding is not changing, but we will encourage families to respect the personal space of others during boarding.

On Aircraft

- Both an electrostatic disinfectant and an anti-microbial spray are applied on every surface of the aircraft, killing viruses on contact and forming an anti-microbial coating or shield for 30 days.
- Sani-Cide EX3, a broad-spectrum disinfectant, is used to clean commonly used areas (onboard lavatories, window shades, tray tables, armrests, seat belts, flight attendant call buttons, and overhead bin handles) before every flight.
- A 4-6 person crew also deep cleans every plane, from nose to tail, for nearly 6-7 hours every night.
- We are also providing Customers with cleaning wipes upon boarding.
- These stringent cleaning policies and procedures are aligned with guidance from the Centers for Disease Control and Prevention.
- All of our aircraft are equipped with High-Efficiency Particulate Air (HEPA) filters, which remove 99.97% of airborne particles—similar to technology found in hospitals.

TRAVEL INFORMATION

- Our aircraft are designed with an air circulation system that mixes in fresh air from outside the plane with air inside the plane.
- Middle seats open through at least September 30 to provide Customers more personal space onboard. Customers can pick their seat—if you're traveling together, you're welcome to sit together.
- Once the plane has landed, you are encouraged to stay seated until your row is clear to move into the aisle.
- We are serving water and a snack mix on flights over 250 miles, when available. Straws are available on request. For all other flights, snack and beverage service is suspended until further notice to limit close interactions. (Began May 22)
- As always, you're welcome to bring your own non-alcoholic beverages onboard. However, FAA regulations prohibit passengers from drinking alcohol on the aircraft unless it is served by the air carrier.

TRAVEL INFORMATION

Helpful Tips

- Book 'first flight out' – airlines generally conduct more extensive cleaning overnight.
- If possible, travel on other less busy business flight days (Sun evening, Friday morning, etc.).
- If possible, travel less frequently (stay on site through the weekend, 2-3 weeks per visit).
- Use mobile check-in and mobile boarding pass if available.
- If using touch screen kiosks, wash your hands or use sanitizer immediately afterwards.
- Use your disinfectant wipes as you board to wipe your immediate seat area, arm rests, seat back and tray.
- Do not utilize the seatback pocket for storage, use your backpack/briefcase instead.
- Wear your mask in-flight as much as possible.
- Most airlines will not enforce face coverings in-flight, nor would they divert a flight due to passengers not wearing face coverings.
- Post flight – wash your hands and/or sanitize your hands, wipe the exterior of your carryon as a precaution (even if it is non-porous).

TRAVEL INFORMATION

#4 – RENTAL CAR RESTRICTIONS AND PROCEDURE

HERTZ

- In addition to following social distancing best practices at our locations, we are raising the bar on our high standards for safety and cleanliness. We are proud to introduce Hertz Gold Standard Clean, an enhanced vehicle disinfectant and sanitization process designed to give you total confidence when you rent a car.
- Every vehicle will be sealed and certified 'Hertz Gold Standard Clean' after undergoing a 15-point cleaning and sanitization process that follows U.S. Centers for Disease Control and Prevention (CDC) guidelines.
- We are rolling out Hertz Gold Standard Clean now in the U.S. and planning to launch in other countries
- Before Hertz rents any vehicle, they are cleaned and disinfected to follow CDC guidelines with our 15-point cleaning process
 - Disinfect vehicle at return area
 - Drive to cleaning area, and perform vehicle condition and tire inspection
 - Inspect Interior
 - Remove trash and lost/found items
 - Vacuum interior front seat area
 - Vacuum interior rear seat area
 - Vacuum trunk
 - Clean window interiors
 - Disinfect all key contact surfaces (steering wheel, consoles, door handles, etc.)
 - Wiper fluid check and replenishment
 - Spray odor eliminator
 - Wash exterior of vehicle
 - Perform quality check
 - Stall vehicle, disinfect driver area and perform final check
 - Place Gold Standard seal on vehicle (door) for your protection

TRAVEL INFORMATION

Helpful Tips

- Utilize the Hertz app to walk directly to the vehicle, avoiding the counter.
- Avoid vehicle changes, etc. that would require contact at the counter.
- Upon arrival at the vehicle:
 - Break the Gold Standard seal on the vehicle
 - Use your disinfectant wipes on the door handle and trunk release
 - Wipe the immediate driver area, steering wheel
 - Use hand sanitizer following wiping
 - Use wipes and/or Covid Key at fuel pumps

TRAVEL INFORMATION

#5 – HOTEL RESTRICTIONS AND GUIDELINES

MARRIOTT

Our Cancellation Policy

In response to changing marketplace conditions, Marriott International is committed to ensuring our customers experience flexibility during these challenging times.

For all Marriott International hotels world-wide, we are extending our flexible reservation policies as follows:

- For guests with existing reservations for any future arrival date, the policies that were in place at the time of reservation, or as previously communicated, will continue to be honored.
- For guests making new reservations on or after July 6 for arrival dates through September 30, we will allow the reservation to be changed or cancelled at no charge up to 24 hours before the scheduled arrival date.* Reservations with pre-paid rates will be subject to the rate offer rules communicated at the time of reservation. Please note that changes to the reservation will be subject to availability and any rate differences.
- For guests making new reservations for arrival dates on or after October 1, individual hotel cancellation policies in place at the time of reservation will apply.

Please note that this policy does not apply to travel associated with a Group booking. For guests with Group reservations (e.g., for meetings, events or conferences), please review the booking rate rules and contact the group organizer for more information.

Guests who booked via online travel agents or other third-party travel professionals are advised to contact their booking provider directly for further information.

***Important Information:**

- Some exclusions may apply. May exclude periods with special event restrictions or peak demand weeks. Please refer to the property's Rate Details for applicable terms or exceptions, if any, when booking or changing reservations.
- Individual (transient) guestroom reservation refunds of any kind (e.g., cash or credit voucher) may take up to 90 days from the date of cancellation to be processed. The form and timing of refund may be subject to applicable laws where each hotel is located.
- Design Hotels and Homes & Villas by Marriott International (HVMI) are excluded from this policy.
- Marriott Vacations Worldwide (e.g., Marriott, Sheraton and Westin Vacation Ownership resorts) is included in this policy for transient reservations only. For owner occupancy reservations, or if you received a rental cancellation notice, please visit <https://hub.vacationclub.com> Opens in a new tab.

TRAVEL INFORMATION

Our Commitment to Cleanliness

Marriott Global Cleanliness Council

Marriott recently announced the creation of the Marriott Global Cleanliness Council – consisting of in-house and outside experts in food and water safety, hygiene and infection prevention, and hotel operations. Together, the council members will work to develop a new generation of global hospitality cleanliness standards, norms and behaviors for Marriott's more than 7,300 properties around the globe. The new standards will be designed to minimize risk and enhance safety for the company's guests and the 750,000 people worldwide who wear the Marriott name badge.

New Cleaning Technologies

While Marriott's council develops its work, the company has initiated plans to roll out enhanced technologies at its properties over the next few months, including electrostatic sprayers that allow for touchless disinfecting capabilities. The magnetically charged droplets produced by the electrostatic sprayers seek out and coat hard to reach areas and surfaces typically missed in standard cleaning processes.

In its everyday cleaning, Marriott will also be using the highest classification of disinfectants recommended by the Centers for Disease Control and Prevention and World Health Organization to treat known pathogens.

Cleaning Regimen Changes

When guests check into Marriott's hotels over the next few months, they will notice a number of additions to the company's regimen designed to set an even higher standard of cleanliness for the hotels. Specific areas of focus include:

- **Surface Areas:** In public spaces, the company has added to its already rigorous cleaning protocols, requiring that surfaces are treated with hospital-grade disinfectants and that this cleaning is done with increased frequency. In guest rooms, Marriott has added to its detailed cleaning practices, requiring all surfaces to be thoroughly cleaned with hospital-grade disinfectants. The company will also be placing disinfecting wipes in each room for guests' personal use.
- **Guest Contact:** To help alleviate the risk of COVID-19 transmission through person-to-person contact, Marriott will be using signage in its lobbies to remind guests to maintain social distancing protocols and will remove or re-arrange furniture to allow more space for distancing. The company is planning to add partitions at front desks to provide an extra level of precaution for its guests and associates and is working with supply chain partners to make masks and gloves available to associates. You'll see more hand sanitizing stations around Marriott's hotels – near the entrances and front desks, elevator banks and fitness and meeting spaces. In addition, in more than 3,200 of the company's hotels, guests can choose to use their phones to check in, access their rooms, make special requests and order room service that will be specially packaged and delivered right to the door without contact. These "touchless" services can all be done quickly via Marriott's mobile app.

TRAVEL INFORMATION

- **Food Safety:** At Marriott, food handlers and supervisors are trained on safe food preparation and service practices. The company's food and beverage operations are required to conduct self-inspection using its food safety standards as guidelines, and compliance is validated by independent audits. Marriott is also enhancing sanitation guidelines and training videos for associates that include hygiene and disinfecting practices. In addition, the company is modifying its operational practices for in-room dining and designing new approaches to buffets.

For Our Members

Travel is a way of life for our Marriott Bonvoy members. It is the way we connect, get inspired and evolve our business every day. While it is the right thing to do, it's been hard not to be able to travel. We know that when you get back in the air and on the road, your points and status will be important to you.

- **Status Extension:** We want you to be able to enjoy the status that you earned in 2019. With that in mind, the status you earned in 2019 will be extended to February 2022.
- **Points Expiration:** To provide you ample time to redeem points, the expiration of points will be paused until February 2021. At that time, your points will only expire if your account has been inactive for at least 24 months.
- **Suite Night Awards (SNAs):** We have extended the expiration of suite night awards by one year from December 31, 2020 to December 31, 2021.
- **Free Night Award (FNA):** Members who currently have an active Free Night Award (FNA) expiring in 2020 as part of their credit card benefit, annual choice benefit, promotions or travel package will be able to use it through January 31, 2021. (Exception: Members in mainland China, Hong Kong SAR, Macau SAR and Taiwan the Free Night Awards will be extended 12 months into 2021 from the date of expiration).

TRAVEL INFORMATION

Helpful Tips

- Use mobile check-in and mobile room-key (if available).
- If possible, avoid elevators altogether and take the stairs. If you must use the elevator, attempt to ride alone – if not possible, limit passenger count from 2-4. Avoid conversation and ensure passengers are spaced as far apart as possible.
- Use disinfectant wipe to wipe down exterior and then interior door handle.
- Use disinfectant wipes to wipe all areas you expect to touch within the room (desk, desk chair, bureau, clothes hangers, tv remote, nightstand, coffee station, bathroom countertop, toilet seat, shower handle, faucet).
- If daily housekeeping has not already been limited, consider requesting additional towels/coffee and no further daily service to the room (also hang the private doorknob sign).
- If possible, avoid the hotel gym and walk/run outside and/or workout in your room. If you use the gym, sanitize equipment prior to and after use.
- If local restaurants are closed or operate at a limited capacity, or if you just do not feel safe from spread in restaurants – consider booking at a hotel such as “Residence Inn”, where rooms have full kitchens where you can refrigerate goods and cook them.

TRAVEL INFORMATION

PERSONAL HEALTH AWARENESS

- Although persons that are immunocompromised or have other underlying health conditions are more vulnerable to infection, otherwise perfectly healthy individuals can also suffer severe infection, or be asymptomatic carriers.
- Covid-19 is primarily a respiratory disease, however, some experience other medical issues without any respiratory infection. Your lung capacity and health should be a high priority. If you smoke, either quit or severely reduce the quantity you smoke. It will take several weeks for your lungs to gain their capacity back. There are also deep breathing exercises that will help with increasing lung capacity over time.
- Traveling with a decent Pulse Oximeter and digital thermometer allows you to easily monitor yourself both for oxygen saturation and temperature. As a general guide, normal oxygen saturation levels should be 95% or higher. If your saturation drops into the low 90% or even lower, it would be a good time to seek medical advice. Generally, a temperature reading of 100.4° or higher (after 30 minutes of no drinking, no exercising, no eating) is cause to monitor your temperature on a regular basis. If temperature persists, you should seek medical advice.

- Persons should consider, after consulting their physicians, increasing daily Vitamin C, Vitamin D/K2, and Zinc. These all support your immune system and may prove to provide additional resistance to infection.
- Daily exercise is also important, not just for Covid-19 but for your general overall health condition
- For most healthy adults, the **Department of Health and Human Services** recommends these exercise guidelines:
 - Aerobic activity. Get at least 150 minutes of moderate aerobic activity or 75 minutes of vigorous aerobic activity a week, or a combination of moderate and vigorous activity. The guidelines suggest that you spread out this exercise during a week. Greater amounts of exercise will provide even greater health benefit. But even small amounts of physical activity are helpful. Being active for short periods of time throughout the day can add up to provide health benefit.

TRAVEL INFORMATION

- Strength training. Do strength training exercises for all major muscle groups at least two times a week. Aim to do a single set of each exercise, using a weight or resistance level heavy enough to tire your muscles after about 12 to 15 repetitions.
 - * Moderate aerobic exercise includes activities such as brisk walking, swimming and mowing the lawn. Vigorous aerobic exercise includes activities such as running and aerobic dancing. Strength training can include use of weight machines, your own body weight, resistance tubing or resistance paddles in the water, or activities such as rock climbing.
 - * As a general goal, aim for at least 30 minutes of moderate physical activity every day.
 - * Reducing sitting time is important, too. The more hours you sit each day, the higher your risk of metabolic problems. Sitting too much can negatively impact your health and longevity, even if you get the recommended amount of daily physical activity.

- **Basic Scientific Facts To Consider for your Personal Health**

- To lose weight, you **MUST** have a caloric deficit - PERIOD
- To gain weight, you **MUST** have a caloric surplus – PERIOD
- The average woman needs to eat about 2,000 calories per day to maintain her weight, the average man needs 2,500 calories to maintain his weight.
 - Start with your body weight x 10-12, then adjust based on results
 - Ex: BW 170x12 = 2040 calories to maintain weight
- To lose 1 pound per week, you need to reduce calories by 500 calories per/day for one week (then adjust as necessary).

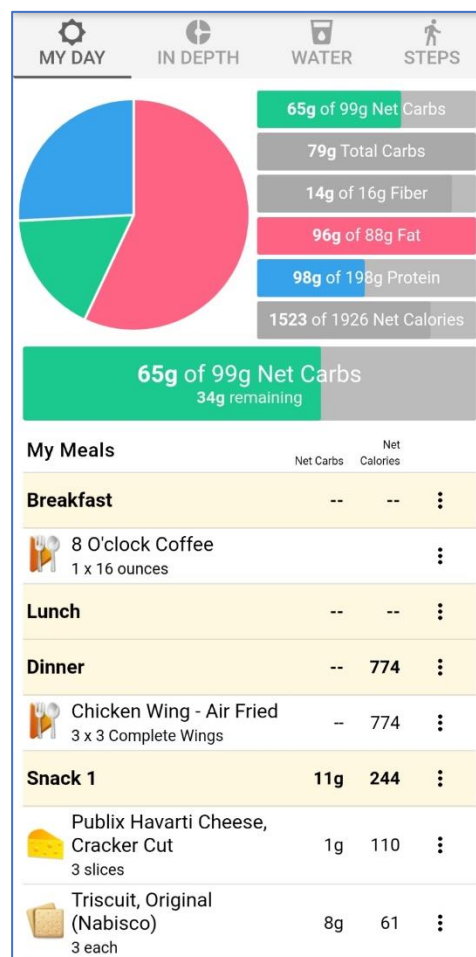

TRAVEL INFORMATION

- You should consume .7 to 1.0 grams of Protein per pound of bodyweight. If you weigh 170 lbs, you need to consume 119 to 170 grams of Protein. The rest of your daily calories can be from whatever combo of carbs and fat that you desire.
 - Muscles are largely made of protein. As with most tissues in your body, muscles are dynamic and constantly being broken down and rebuilt. To gain muscle, your body must synthesize more muscle protein than it breaks down. In other words, there needs to be a net positive protein balance in your body — often called nitrogen balance, as protein is high in nitrogen.
 - For this reason, people who want a lot of muscle need to eat a greater amount of protein (and weight or resistance training). It is well documented that a higher protein intake helps build muscle and strength
 - People who want to hold on to muscle they've already built may need to increase their protein intake when losing body fat, as a high protein intake can help prevent muscle loss that usually occurs when dieting. When it comes to muscle mass, studies usually don't look at the percentage of calories but rather daily grams of protein per kilograms or pounds of body weight.
-
- The reason why all the diets (Keto, Paleo, Vegan, Carnivore, Gluten-Free, Fasting, Whole-30, etc.) work is that they ALL still force you into a caloric deficit to lose weight. Pick one that works for you and go with it. For other health reasons, limiting carbs (or sugar) to less than 100g per day is a good start.
 - Weight training should be 2-5 times per week. You should segregate exercises into a "Push" day and a "Pull" day. Do not combine push and pull exercises. Protein synthesis is complete after 36 hrs, meaning you are done building muscle or "Recovered". That is why one day on, one day off a muscle group.
 - Get away from sets and reps. Do an exercise to complete and total fatigue (full repetitions and then half repetitions until you cannot, with all the fiber in your being, do another ½ rep). This will teach your body to build muscle rapidly. Generally, less than 15 reps mean your weight or resistance is too heavy, more than 40 reps means you are ready to advance in weight or resistance.
 - Once you know your target calorie intake, unfortunately, at least for a while, you will need to track your calories and other macros. There are great phone apps that help you a ton in doing this. Over time, and after you visibly see results that motivate you, you will have learned what works well for you, and will not need to count obsessively.
 - Remember, if you are tracking carbohydrates, that the important number is "Net Carbs". Net Carbs = Total Carbs – Dietary Fiber – ½ Alcohol Sugars (if any). Ex: A 20g total carb food product has 14 grams of fiber and 2 grams of an added alcohol sugar sweetener. Net Carbs would be 5g.

TRAVEL INFORMATION

- It sometimes can be extremely hard finding the balance of caloric intake versus eating enough protein on a daily basis. For some body weights, you could eat 3 ribeye steaks and several eggs and still not reach the target protein level needed yet holding at the caloric deficit level to lose weight. This is the trick of converting body fat to muscle – which can be weight neutral. Fortunately, there are products called EAA's (Essential Amino Acids). These provide very low calorie solutions and very high usable protein (up to five times that of traditional whey protein) that you can supplement your daily diet with to not have to eat like a caveman. EAA products are formulated differently, so do some research (i.e. some are for endurance versus others for bulk muscle).
- Consider that traditional whey, while advertised it is providing you 30grams of protein, only approx. 18% of that, or 5 grams, is USABLE protein for synthesis.
- Apps such as Carb Manager and My Fitness Pal, among many others basically have you input exactly what you are eating and drinking, the amount of servings, etc. and report out on your intake and progress.
- If you are weight training – **YOU ARE** getting plenty of cardio plus a full day burn on calories.
- Walking & Running do not provide very much caloric burning and stop when the exercise ends. HOWEVER – the added cardio effects, lung capacity and general stress/anxiety reduction provides many benefits as well in terms of body stress.
- For stress, anxiety, happiness, relationships, health – there are phone apps that are extremely good for meditation. **'Ten Percent Happier' and 'Calm' are the more well-known apps.** You can devote as much time as you like during "sessions", but they are aimed to bring your mental state to a stable balance.
