

the Stores Consulting Group

*Occupancy Compliance/Mitigating Checkout
Congestion Solution Sets*

The retail market is undergoing rapid transformation as a result of COVID-19. It has changed consumer's preference on where to shop based on their belief of safety and security. Government occupancy regulations are here to stay, with states mandating occupancy maximums that are significantly lower than "normal" to facilitate social distancing.

Progressive retailers are using sophisticated occupancy and checkout queuing solutions to manage traffic allowed to enter the store, and to mitigate historically high congested checkout areas. Retailers that drive delivery and BOPIS as well as adopt these solutions will have a huge advantage in customer and associate confidence that their stores are the safest and securest places to work and to shop.

Evolution of Occupancy and Traffic Flow

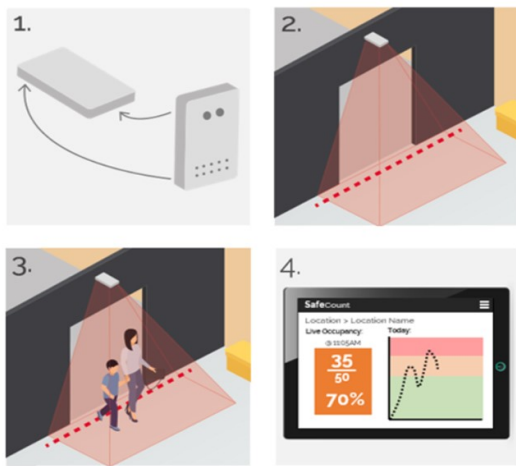

Occupancy Compliance/Mitigating Checkout Congestion

...Continued

fSCG and Irisys have a strategic partnership to bring these leading-edge occupancy and total store traffic management solutions to retailers. Our solutions assist retailers with both the technology and thought leadership requirements to cost-effectively deliver customer and associate environments that are safer and more secure than before. Education and Change Management are essential. The illustration below showcases an actual client's application of these solution sets that create the competitive advantage in this arena.

Real Time Occupancy and Queue Management Technology

- Advanced people counting sensors anonymously keep track of customers entering and leaving your building
- Occupancy rates are then calculated and available to staff and management where they can now manage expectations related to desired occupancy rates per current situation

- Front End QM system 'live' alerts staff / management team about both current and future lane disposition
- Improves immediate and future labor efficiency model
- Improves customer service and throughput
